

## Warning relating to air pistols – Compressed Air Cylinders Model 2/WALTHER 0,085 ccm – Manufacturing period 2000/2001

WALTHER represents the highest quality in sports shooting. We therefore wish to inform our customers of the following **Safety Risk**:

In the course of the analysis following an accident with a burst older aluminium- compressed air cylinder a defect in the raw material has now been ascertained for the first time. The raw material batch from which the burst cylinder came was supplied to WALTHER in 2000 and the cylinders were sold up to 2001. We cannot exclude that other cylinders from this batch may also be affected by this fault.

**The cylinders are liable (not only when being filled but also when in use) to burst and cause serious injury in view of the high pressure.**

For this reason, air pistols – compressed air cylinders Model 2/WALTHER 0,085 ccm with the imprinted test date between **6 00 and 6 01** (see illustration) **2000/2001** may no longer be used and must be immediately depressurised.

Earlier and later batches and, in particular, the present compressed air cylinders as well as compressed air cylinders for rifles **are not affected**.

For safety, however, we again point out the basically **maximum period** of use of all compressed air cylinders of **10 years**. ([http://www.carl-walther.info/dev2/images/start/kartuschen\\_info\\_en.pdf](http://www.carl-walther.info/dev2/images/start/kartuschen_info_en.pdf)).

We will, if desired, replace the affected air pistols – compressed air cylinders 2000/2001 by a new cartridge at the **special price of €48,- (including VAT)**.

This will be dealt directly through our customer service department or through the trade shops:
